MODULE – 7(Laravel)

->How to pass Multiple Variable in route?

ANS:

define routes that accept multiple parameters with curly braces and slashes separating them.

ex:

Route::get('/users/{id}/{name}', ['UserController::class,'show'])->name('users').

->How to pass variable which can be null in Route?

ANS:

You can pass a variable that can be null in a route in Laravel by using an optional path parameter.

ex:

return ["ad_id" => null, "delivery_id" => null, "group_event_id" => null,];

->Generate Resource Controller for employee.

ANS:

The controller will have the following methods:

index(): This method will display a list of all employees.

create(): This method will display a form for creating a new employee.

store(): This method will store the new employee in the database.

show(): This method will display a single employee.

edit(): This method will display a form for editing an employee.

update(): This method will update the employee in the database.

destroy(): This method will delete the employee from the database.

->How to remove route caching?

ANS:

To clear the route cache in Laravel, you can use the following artisan command: php artisan route:clear.
